

# Vx<sup>®</sup> Therapy Program

## What is the Vx Therapy?

### Safe, Proven Pain Relief

**Vx Therapy** is a proprietary virtual reality therapeutics platform that utilizes a bio-psycho-social approach to patient care. This approach promotes long term pain mitigation and resiliency as well as validated efficacy in treating the effects of trauma.

Vx Therapy is non-invasive and non-pharmacological. Immersive VR Therapeutics help patients reduce pain, decrease anxiety, and build resilience. Harvard MedTech Personal Clinician support enhances experience, engagement, and outcomes.

## What are the Outcomes?

### Substantial and Immediate Pain Relief

- **40%** immediate pain relief while using Vx headset
- **2.8** hours of continued/legacy pain relief following headset use

### Increased Participation in Physical and Social Activities

- **300%** increase in physical activity endurance
- **700%** increase in the number of daily physical activities performed
- **650%** increase in the ability to participate in social activities

### Impact on Opioid Usage

- **69%** decrease in opioid usage
- **38%** total cessation
- **31%** dosage reduction

**Vx Therapy** provides a safe, effective in-home treatment for trauma which can include chronic or acute pain, depression, anxiety, sleep issues, and PTSD-related symptoms. Our 3-month in-home program blends biological components (delivered via Virtual Reality) with psychological and social components (delivered via a remote Behavioral Health Clinician).

### Better Outcomes

- Early pain intervention
- Greater resiliency for rehab
- Opioid sparing
- Improved function

### Better Surgical Experience

- Harvard MedTech Personal Clinician
- At-home therapy
- Less medication
- Manage anxiety and stress
- Better sleep
- Increase activities of daily living
